If you want to play a key role to make health a reality for all, join our programme!

Studying at ISGlobal means...

• Exchanging ideas and experiences with students from different geographical and professional backgrounds

• Interacting with teachers who are experts with extensive field research experience in low-resource settings worldwide

• Obtaining a degree from world-class leading academic institutions: the University of Barcelona and ISGlobal

• Engaging with ISGlobal’s interdisciplinary staff, comprising over 350 professionals worldwide

• Networking with successful ISGlobal past students through our dynamic alumni community

Marc Fernández Prados, Student Master: Clinical Research – International Health Track 2016-2017

This masters represents a unique opportunity to do transdisciplinary research, with inputs from many fields, such as social determinants or health systems, which broadens your research

More information: www.isglobal.org/education
Do you want to help improve global health by conducting outstanding research?

This programme opens the door to a research career in global health, giving access to PhD studies. It provides a balanced mix of theoretical and hands-on training and opportunities to participate in ongoing research projects led by ISGlobal investigators and partners.

**By the end of the programme you will be able to:**

- Critically analyse scientific evidence and generate new hypotheses addressing the health challenges facing vulnerable populations around the world.
- Apply key competences to designing, carrying out and evaluating research into health systems and the prevention, control and treatment of communicable and non-communicable diseases.
- Assess research results from a multidisciplinary perspective and suggest how to translate them to innovative solutions at the local, national and international level.

**Methodology**

The programme combines both lectures and active and participatory teaching methods. Students learn by doing and by solving problems, using a collaborative and transdisciplinary approach.

**Programme 60 ECTS**

**Core Credits**

- Systems Medicine
- Research Tools and Methodologies
- Instruments of Design and Analysis for Research

**Track Credits: International Health Track**

**Required**

- Bioethics
- Health Systems and International Organisms in International Health
- International Health Determinants
- Principal Health Problems and Responses

**Elective**

(four subjects to be chosen from the list)

- Applied Epidemiology in International Health
- Chronic Diseases in a Globalised World
- Clinical Trials
- Development and Application of Vaccines in International Health
- Environmental Epidemiology
- Maternal and Reproductive Health in International Health
- Qualitative Research Methods
- Strategies for the Prevention and Control of Communicable Diseases
- Statistical Modelling

**Master Final Project**

**Requirements and Application Process**

The programme is intended for students who have a degree in health or life sciences.

To apply: www.isglobal.org/training-programmes
