

SCIENCE FOR PATIENTS

<http://acceso.isglobal.org>

PROBLEM

One out of three people in the world lacks access to the medicines they need.

Why?

- 1 They do not exist
- 2 They exist but are not affordable

What do the scientists observe?

REASONS

R&D does not always respond to the population's health needs

Lack of transparency (in clinical trials, pricing...)

Insufficient public funding and difficulties in recovering this investment

RECOMMENDATIONS

Create incentives that promote research in health needs

Adopt good practices in knowledge transfer

Strengthen the State's role along the entire process
